

Self Contained Refrigerator Checklist

Check temperature and adjust if necessary.

Clean condenser coil with compressed air and/or chemicals.

Inspect evaporator and clean as necessary.

Clean evaporator pans and blow out drain lines as necessary.

Take baseline data annually, including pressures, amperage draw and superheat where possible.

Check gaskets and hardware. Recommend replacement when and if necessary.

Visually inspect all fans

Inspect electrical components.

Inspect compressor and connections for oil leaks.

Test for refrigerant leaks by electronic detector.

Check charge by sight or glass pressure.

Test freezer defrost cycle operation.

Install thermometers where missing.

If after we perform the above maintenance check we determine you require replacement parts or additional service, we will extend a 10% discount for parts and service ordered.
